

Asthma #1

Develop a system to track students with asthma (required).

Definition: Develop a system to track students with asthma and communicate students' status to appropriate teachers. The purpose of having a system is to let nurses, faculty members and staff know which students have asthma so that students receive support in managing their asthma.

Assignments

School Coordinator Assignments

- At the beginning of the school year, work with the school nurse and administration to create a plan to track students with asthma
- Ensure the Asthma Action Plans are on file with the school nurse
- Decide who will manage this list of students (if different from nurse)
- Distribute this list to teachers that have students with asthma in their classroom
